March 1981

A review of the following 1980 annual report will give you an idea of the many public health services provided by your Board of Health and staff.

During the past year many hours were spent in obtaining the Federal funding necessary to maintain the Rural Health Initiative program. We feel this program is vital to those who need access to primary health care services. The underserved would suffer considerably if this program were discontinued.

There are other programs detailed in this report that merit your attention; Alcohol Rehabilitation, Child Development, Dental Care, Environmental Health, Family Planning, Home Nursing, WIC and Vital Statistics. Each provides an aspect of public health very necessary to our residents.

Your Health Department operating costs continue to increase because of the existing economic conditions. The State has established fees for previously free services and new procedures which require additional monetary expenditures. Unfortunately, we must now pass these charges on to the consumer.

On behalf of the department I want to express our sincere gratitude to the many fine people who so ably provided public health assistance during the past year. We are proud to have the Volunteer Staff, public officials, the radio, news media and many other dedicated groups and individuals among our most valued assets.

We continue to welcome your opinions and ideas. Your cooperation, communication and concerns will help us to make Tuscarawas County a better place to live.

Sincerely,

Robert C. Hastedt, M.D.
Health Commissioner

PRIMARY HEALTH CENTER

The Tuscarawas County General Health District provides primary health care services. These services include ambulatory care for the diagnosis and treatment of diseases, preventative health care, emergency care for acute illness and Early Periodic Screening, Diagnosis and Treatment (EPSDT). The Health Care Center is Federally funded by the Department of Health and Human Services and the Appalachia Regional Commission to provide health and dental services to residents of Appalachia and medically underserved areas.

Clinic Hours:

Dover - Mondays 8:00 a.m. - 8:00 p.m.
Tuesday through Friday 8:00 a.m. - 4:00 p.m.

Uhrichsville - Tuesday 8:00 a.m. - 8:00 p.m.
Thursday 8:00 a.m. - 4:00 p.m.

Newcomerstown - 1st Tuesday of every month 8:00 a.m. - 4:00 p.m.

The Rural Health Initiative Program (RHI) In June of 1977 the Primary Health Clinic project was implemented to provide health care service under the supervision of a physician and nurse practitioner for all ages. The program presently provides for a comprehensive assessment of a patient's health status including complete physical examination; laboratory services; diagnosis and treatment of acute and chronic illness; preventative care; pregnancy testing; pre-natal, post-natal care; immunizations and tuberculin testing. It also provides preventative health education and guidance in managing health problems. The Health Center provides the following services Monday through Friday of each week.

Audiology - Non-medical determination of the range, nature and degree of hearing loss and of a person's need for group or individual amplification.

Dental - Restorative dental services are provided daily, Monday through Friday. Three dentists share the schedule in order to provide full time dental care.

Speech Therapy - Providing for the corrective procedures necessary to correct deficiencies as identified by speech evaluation screening.

Child Development Service is a health program for children ages 0-6. This very comprehensive program includes assessments and diagnosis of health problems in the following areas.

Hearing Screening - An evaluation of ability to perceive sound.

Motor Skills (Denver Development) - A determination of gross and fine motor skills based on the child's exhibition of those skills.

Vision Screening - An assessment of ability to perceive visually and/or auditorally, such as ability to discriminate sounds, and judge figure/ground relationships.

Speech Screening - An appraisal of a child's speech and/or language disorders such as impaired articulation, stuttering or voice impairment.

Medical - Evaluation of health status, including diagnosis of chronic or communicable disease, physical disability or other medical problems. It also includes services related to personal and/or community health such as provision of vaccinations, necessary laboratory tests and assistance in development of good nutrition habits. Referrals are made to a physician of the patient's choice.

Dental Screening - Assessment of dental problems and referral to dentist of patient's choice.

Parent Training - Assistance to parents in (a) the development of skills needed to become effective parents and (b) the understanding of their personal needs and those of their children.

Environmental Service - An assessment of housing, private water supplies, unsafe conditions, refuse storage and community environmental concerns.

7,150 patient visits were made to the Dover, Uhrichsville and Newcomerstown Clinics in 1980.

Early Periodic Screening, Diagnosis and Treatment (EPSDT) has been provided to help meet the health care needs of eligible persons 0 - 19 years old under the Medicaid Program. In 1980, 393 visits were made. These visits include complete physical examinations and assessments. When problems are detected, they are referred to a physician of the patient's choice.

Family Planning Services provide physical examinations, education and counseling to those women desiring the choice of when to begin a family and the spacing of their family. In 1980, 3,789 visits were provided to 1,362 persons. The program is conducted during regular Health Center hours in Dover and on Tuesdays in the Uhrichsville Health Center.

Women, Infants and Children (WIC) - The Special Supplemental Food Program for Women, Infants and Children is a Federally funded primary and preventative health program. It is administered statewide by the Ohio Department of Health, and locally by the Health Department. Since its inception in April 1974, the program comprised of food supplements and nutrition education, has served 9,323 persons.

In order to participate:

1. A person must be pregnant or have had an infant within the last 6 months; be breastfeeding an infant who is less than one year old; or be an infant or child less than 5 years old.
2. Live within the geographic area approved for this agency. This locally includes all of Tuscarawas County and fringe areas of Carroll County served by the Goshen Dairy on their regular delivery routes.

3. Be eligible to receive health care free or at less than full charge customarily made for health services by this agency.
4. Be determined to be in nutritional need through a medical and nutritional assessment performed by a nutritionist on the staff of this agency.

Participant's eligibility is checked on a regular basis.

Nutrition education is provided at three and six month intervals for participants and their families.

In our local project, the food supplements are delivered to the participant's home by the Goshen Dairy. These foodstuffs include iron-fortified formula, infant cereal and juice for infants to one year of age. Milk, eggs, juice, cereal and cheese for women and children one to five years of age. Amounts delivered are based on individual needs with the maximum quantity set by the U.S.D.A.

	<u>1979</u>	<u>1980</u>
Women	321	360
Infants	446	387
Children	1,068	1,233

PUBLIC HEALTH NURSING PROGRAMS

Communicable Disease Control consists of the follow up services necessary where communicable diseases such as venereal disease, tuberculosis, hepatitis, salmonellosis, etc. are reported by physicians, hospitals and other agencies.

Hypertension Program provided nineteen screening programs to detect high blood pressure. 1,315 individuals availed themselves to these services.

Public Health School Nursing Programs

Sixteen county schools were provided with school health services. Your public health nurses also served as consultants with other school nurses. They also act as liaison between the community and health department. Health programs conducted in the schools are:

Scoliosis Screening Program was provided for 1,305 sixth, seventh and eighth grade students. This screening program is conducted to detect curvature of the spine. Forty two persons were referred to private physicians or the Orthopedic Clinic for medical follow up examinations.

Vision Screening was provided for 1,750 students. 202 were referred to eye specialists for further evaluation or treatment.

Hearing Screening was completed on 145 students. Two were referred to hearing specialists or the P.O.D. clinic.

School Hypertension Program was provided to the seniors and school personnel in four high schools. The program provides education on, and detects the presence of high blood pressure. 411 persons were checked and 8 referred for additional evaluation.

Educational Activities - Public Health Nurses provided 55 health programs for students or teachers. They also conducted 242 kindergarten registration and pre-school conferences with parents at seven elementary schools. 50 visits were made to the homes of newborn infants at the request of Akron Children's Hospital. 154 additional home visits were provided at the request of schools or the health center.

Tuberculosis Control Program is provided for those persons with positive Mantoux skin tests or active tuberculosis under treatment by a physician. Five active cases were treated during 1980 and twenty-five persons are receiving tuberculosis medication. 399 TB skin tests were also given.

HOME HEALTH CARE

The Home Health Agency provides multiple care services for homebound patients in their home under the direct orders of the patient's family physician on a visiting basis. These services include Skilled Nursing Care, Physical Therapy, Speech Therapy and Home Health Aide.

This program:

1. Shortens the hospital stay by permitting convalescing patients to return to their home at an earlier time.
2. Makes it possible for patients to remain in their home if they wish to do so.
3. Decreases the financial burden when the patient has to be institutionalized or remain in the hospital.
4. Coordinates community resources for the sick at home.

The duties of the Registered Nurse include:

1. Enemas
2. Dressings and wound treatment
3. Catheterizations and instruction of bladder irrigations
4. Diet instruction
5. Injections
6. Instruction for oxygen and Respiratory Therapy and care of equipment
7. Blood work for laboratory procedures
8. Colostomy irrigation
9. Decubiti care

10. Varicose ulcer care
11. General nursing care such as checking patient's temperature, blood pressure, pulse and respirations
12. Supervises the Home Health Aide every 2 weeks
13. Skilled observations and teaching family members to accept responsibility for care of the patient when patient is incapable of caring for himself.

The duties of Home Health Aide include:

1. Bathing patient
2. Changing bed linens
3. Shampoo
4. Nail care
5. Mouth care
6. Feeding patient
7. Prepare light meals and light housekeeping as directed by R.N.

The Physical Therapist duties include:

1. Restorative care
2. Maintenance care
3. Gait training
4. Therapeutic exercises
5. Range of motion exercises

The Speech Therapist duties include:

1. Speech evaluation
2. Motor evaluation
3. Counseling with family on speech expectancy and acceptance of illness
4. Refer patient and family to proper community resources for continuity of care.

The number of visits made in 1980 for each discipline are listed below are compared to 1979 figures.

<u>Home Visits Made By:</u>	<u>1979</u>	<u>1980</u>
Public Health Nurses	3,689	3,628
Physical Therapist	892	908
Speech Therapist	135	208
Home Health Aides	1,513	2,016
Bureau of Crippled Children's visits	119	94

ALCOHOL PROGRAM

The Public Health Center recognizes Alcohol Abuse as a community problem. The goals are to develop public awareness and understanding of alcohol use, abuse and alcoholism, and to encourage the community to become involved in the prevention, intervention and treatment of the problem.

The following is a breakdown of the services delivered in Tuscarawas and Carroll Counties:

1. Problem Drinkers Clinic

Problem Drinkers Clinic is a two hour educational program which meets on Wednesday evenings from 7:00 p.m. until 9:00 p.m. It highlights alcohol use, alcohol misuse, and alcoholism as it affects the individual, family and society. It is open to the public.

	<u>1979</u>	<u>1980</u>
Problem Drinkers Clinic		
New admissions	142	111
Return visits	633	481

2. D.W.I. Counterattack School

D.W.I. School is a four week educational program designed to educate those drivers who have been convicted of a D.W.I. Area of concentration is effect of drinking and driving.

	<u>1979</u>	<u>1980</u>
D.W.I. Counterattack School		
New admissions	149	246
Return visits	418	611

3. Counseling

Counseling is provided in one hour units to individuals who have a drinking problem or those friends, relatives and acquaintances who may be affected by a person's drinking. Counseling may take place on an individual, marital or family basis. Group counseling is done where indicated.

Auxiliary contact are phone conversations with other agencies, relatives, friends about the individual in counseling. It also includes all crisis counseling, phone counseling or information and referral calls handled.

Information only visits are one time only visits provided for assessment of a drinking problem.

	<u>1979</u>	<u>1980</u>
Counseling		
New Admissions	132	289
Return visits	338	558
Total Counseling visits	470	847
Auxiliary contacts	496	1470
Information only visits	85	44

4) Educational Activities

Inservice and presentations are all talks and educational training sessions provided to schools, civic groups, social agencies, law enforcement departments, attorneys, and other agencies in the area of alcohol use, misuse, and abuse.

Radio programs are those programs taped or live which educates the public in alcohol and alcoholism. Newspaper releases are those written or relating to our agency or alcoholism. Films shown include the number of times films were used as part of our educational programs. Finally, literature distributed explains the number of different pieces of literature distributed by the alcohol center.

	<u>1979</u>	<u>1980</u>
Education		
Inservice and presentations	150	195
Radio programs	10	11
Newspaper releases	32	47
Films shown	216	240
Literature distributed	10,367	24,077

5) Mini-Teenage Institute

The second annual Teenage Institute was held at Camp NEOSA in November of 1980. Our local Teenage Institute is patterned after the State Teenage Institute for the prevention of alcohol and drug abuse.

ENVIRONMENTAL HEALTH

1980

A review of this environmental report indicates many significant changes in the course of action pursued by your five sanitarians.

Nuisance Abatement: There was a 70% increase in the number of nuisance conditions investigated. Most of these are a direct result of people not caring about others. Some are a result of economic conditions and others are created by people who evade their responsibility as property owners. The abatement of nuisance conditions has been successful, but very trying at certain times. It has been very gratifying to note the success in minimizing the illegal, indiscriminate roadside dumping that seems to plague us all. During the past year 343 nuisance inspections and consultations were conducted in the following areas: Refuse - 70, Garbage - 50, Sewage - 95, Animal - 51, Housing - 22, and Miscellaneous - 55.

Private Water Supply: 289 water samples were secured from private water wells and springs. 27% were found to be of unsafe bacteriological quality. The Ohio Public Health Council has established statewide regulations that become effective in 1981. Hopefully, the enforcement of this regulation will result in better protection of our ground water supply and fewer unsafe samples. We also collected 53 samples for chemical testing.

Housing Program: As we examine the housing program we find that housing inspections have dramatically increased by 70%. The public awareness of this program, which was established in 1972, has increased considerably. There are families living in undesirable conditions because they have established this lifestyle from previous experience; others because economic conditions, and/or apathetic landlords are contributing to unsatisfactory, unsafe housing. These observations indicate that public housing education is very necessary. This past year we provided 157 housing inspections and consultations along with 27 child development housing inspections.

Private Sewage Disposal: The number of permits issued for private sewage disposal systems has decreased 70%. This decrease can be attributed directly to the economic conditions. High interest rates and inflation have deterred rural development. However, many are still planning for future development and our field evaluations continue on a regular basis. We conducted 593 private sewage disposal inspections and consultations this past year.

Mosquito Control: The 1980 mosquito control program functioned as expected until the wet weather conditions of August and September produced record numbers of adult mosquitoes. Mosquitoes were hatching more frequently than we were able to spray. As a result of this tremendous increase, your County Commissioners approved funding for larvicidal treatment of wetlands by helicopter. 1,710 acres were larvicided and the problem brought under control

by late September. Unfortunately, we may expect similar numbers to develop in 1981 if similar weather conditions prevail. By the way of comparison, the funding provided by your County Commissioners amounted to 58% of the total mosquito control funds received for the entire program. Without additional revenue necessary to employ a helicopter service, there is no way to adequately control mosquito development in the many inaccessible wetlands in adverse weather.

Our proposed mosquito control bill has been dropped with the expiration of the 1980 legislature. Rep. William Hinig has advised us that he would introduce it in 1981. This legislation would provide for sub-divisions to join and have representation in a Mosquito Control District. The District would be funded by assessment of .3 mill, not by village or township funds, and it would have a much broader working capability than that which presently exists.

There were approximately 8,150 acres treated during the 1980 mosquito season. Each area was treated approximately 12.5 times by adulticiding or larviciding.

School Inspections: Every school within the Board of Health jurisdiction has been inspected as required by Ohio Revised Code. The school physical facilities within the 44 buildings inspected continue to improve each year. Boards of Education have been very cooperative by giving major health items funding priorities.

Solid Waste: The disposal of sewage sludge and septic tank pumpings account for about half of the waste disposal problems encountered in 1980. It seems logical that sewage sludge, being an organic material, could best be disposed of by land application as fertilizer. However, some sewage sludge contains certain elements which are undesirable or unsafe for growing specific crops. Surface and ground water supplies must not be contaminated, nuisance conditions cannot be allowed and surface run-off must be controlled. To this goal, we are considering regulations to govern land disposal of this material.

We are still of the opinion that local residents should have the opportunity to express their views when waste disposal is proposed in the area which they live. However, this was not the case in May when the OEPA approved the spreading of Massillon City Sludge in Wayne Township. We challenged their expressed authority to approve the proposed application without local consent and the disposal project has been temporarily delayed.

As we consider our environmental future, we must remember that we, as consumers, are contributing to the creation of certain solid and hazardous wastes. Therefore, we should assume some responsibility in the proper disposal of them. The disposal of hazardous waste is now conducted under Federal and OEPA regulations.

In 1980 your department conducted 21 solid waste disposal inspections and consultations along with 8 dumping inspections.

Rabies Control: Legislation, new this year, now requires the owner or harborer of a biting animal to have it checked for rabies by a veterinarian at the beginning and at the end of the 10 day quarantine period. Strays are held for three days and then euthanized and the head delivered to the State laboratory for rabies testing.

Other animals known to be carriers of the rabies virus, i.e. foxes, skunks, raccoons, must be destroyed and the brain tissue tested if they have bitten someone. This program procedure requires considerably more administrative work than before. However, compliance and cooperation have been excellent.

In 1980 there were 290 animal bites reported and investigated. We delivered 35 animal heads to the laboratory for rabies testing. One fox head was found to be positive for rabies virus. Animal bite investigations were as follows: Bats - 6, Cats - 36, Dogs - 212, Other pets - 2, Wild animals - 34.

Food Service & Food Establishments: Tuscarawas County food operations rated above the State average in 1980. Our inspectors are constantly aware of the many "back room" areas which are not readily visible to the consuming public. The high turnover rate of restaurant personnel also contributes to the list of violations found and reflects the need for continuing education.

Food vending machines, mobile food operations, grocery stores, fairs and festivals continue to require more frequent surveillance by your sanitarians. We conducted 393 food service inspections and consultations, 34 vending machine inspections and consultations, and 89 food handling establishment inspections and consultations in the past year.

Miscellaneous Inspections & Consultations: In 1980 there were 223 semi-public and municipal water samples collected. 9 semi-public and municipal inspections and consultations were made relative to public water supplies.

20 semi-public and municipal sewage disposal inspections and consultations were also provided during the year.

We conducted 18 trailer park inspections and consultations, 11 camp inspections, 7 swimming pool inspections, 1 marina inspection, 150 miscellaneous inspections and consultations and 41 whey samples were secured for bacteriological testing.

NOTE: Environmental problems are solved by cooperation; and your sanitarians welcome the opportunity to meet with Township Trustees, City and Village Councils, and other groups regarding any environmental concerns they may have. Please feel welcome to contact us any time.

1980 VOLUNTEER STAFF

Penny Zurcher, Volunteer Coordinator

The Board of Health, Health Commissioner and staff take this opportunity to express their sincere gratitude to the following persons who so willingly provided volunteer assistance to the Health Center during 1980.

SPECIALTY CLINICS

Public health nurses provide assistance in staffing the following specialty clinics:

Cardiac

Five clinics were held under the direction of John Kramer, M.D. 85 patient visits were made to the clinics concerning heart related problems.

Orthopedic

Eleven clinics were held during 1980. 740 patient visits were made to the clinics conducted under the direction of E. L. Mollin, M.D. and Barry J. Greenberg, M.D. The clinics are sponsored by the Ohio Department of Health, Bureau of Crippled Children and provide services dealing with the preservation and restoration of the function of the skeletal system.

We extend our sincere thanks to Dr. E. L. Mollin who has retired after many years of dedicated service to the residents of Tuscarawas County.

Pediatric Otological Diagnostic (POD)

Five clinics, sponsored by the Ohio Department of Health, Division of Communicative Disorders, were conducted under the direction of David L. Pickett, M.D. and Raymond S. Rosedale, M.D. 94 patient visits were made concerning the preservation of hearing and the prevention of deafness.

VITAL STATISTICS

In Ohio, the Vital Statistics law requires the attending physician or person in attendance at the time of birth to file a certificate with the local registrar for each live birth occurring in the State.

The funeral director is responsible for filing a certificate for each death occurring in the State.

The data presented on the following page has been compiled from original certificates of live births and deaths during 1980. The Vital Statistics division of your Health Department maintains records of the births and deaths in Tuscarawas County since 1908.

Certified copies of birth and death certificates are available at a charge of \$2.00 each. You may contact the Vital Statistics Registrar during regular health center hours.
