

Swine flu clinics set

Cardiac clinic to screen infants to 21-year-olds

The building committee of the Tuscarawas County health center and commissioners will meet Wednesday 11 a.m. in the commissioners' call for advertisement for construction

A cardiac clinic serving children from birth to age 21 will be initiated June 2 by the Tuscarawas County and New Philadelphia health departments in the maternal and child health clinic in the old part of Union Hospital.

The clinic, sponsored by Department of Health, Dr. John C. Kramer, a pediatrician, and Kramer Associates, P.C., is located at the corner of 11th and Washington streets.

FRIDAY, NOV. 5
9 to 11 a.m. — Rush Township, Bolivar Township, and Lawrence Township (including Bolivar). Bolivar County numbers: 1 to 3. — Clay Township town hall, at City town

TUSCARAWAS COUNTY GENERAL HEALTH DISTRICT
818 Boulevard, Dover, Ohio 44622

December 31, 1976

The following pages contain the Annual Report of your Tuscarawas County General Health District.

As the custodian of public health, your department is charged with providing Tuscarawas County residents with preventative health care services.

We are most happy to be able to state this is "your" Health Department because of the support of the many citizens that enable us to build better health programs that are recognized throughout the State and Nation.

The Board of Health staff, and I, extend our thanks for your support of the new Health Center. We look forward to being able to serve you, and our community in a more efficient manner when the project is completed.

Your Health Department programs have brought many dollars into the economy of our County. However, the true value of these programs can only be measured in the health benefits our residents receive. Good physical and mental health, the quality of living, comfort and economic values are the results of cooperative health program implementation. In many cases the benefits are not immediately visible. This may be one reason why adequate funding of health care programs becomes more difficult each year. However difficult the task may be, we must continue to maintain and expand the delivery of health care programs necessary for our present and future generations.

One of the more publicized programs of the year was the Swine Flu Immunization Clinics that were held in each of the Townships. As we consider this and the other departmental activities of the year, we wish to express our sincere thanks to the many official and voluntary organizations who have participated in and supported the health care programs.

The newly developed program for recruiting and coordinating volunteer health workers proved to be a most valuable asset to your Health Department this year. The many, many hours of service that were dedicated to public health are very much appreciated. We also extend our thanks to the media, who provided valuable public health programming and news, WJER, WBTC, The Times-Reporter, The Chronicle, The Newcomerstown News, The Sugarcreek Budget, and TV 2.

Any suggestions you may have to improve the public health services of our community will be appreciated.

Robert C. Hastedt, M.D.
Health Commissioner

Dexterity development, including gross motor, fine motor, language, personal and social development, physical development and defects, vision, hearing and color blind, speech, and nutritional deficiencies of the well child are detected in the Maternal and Child Health Centers. Program visits this year exceeded 38,000 since its inception. Of these, over 9,000 conditions and defects have been identified. The infant mortality rate in 1968 was 39.7%. In 1972, the Maternal and Child Health Program was instituted. Since then the infant mortality rate has been reduced to 15.2%. The state wide infant mortality rate is 15.8%.

A significant statistical comparison is made to "enterers into school". This change occurred following six months of operation of Maternal and Child Health Centers from the 1971 - 1972 school enterers, to the 1972 - 1973, 1973 - 1974, and 1974 - 1975 school enterers.

School Enterers	1971-72	'72-'73	'73-'74	'74-'75	'75-'76	'76-'77
Enterers with Physical Exam	28%	45%	65%	75.2%	76.3%	78.9%
Enterers with DPT	37%	47%	89.7%	93.5%	93.8%	94%
Enterers with Polio	36%	47%	89%	92.3%	93.6%	91.7%
Enterers with Rubeola	31%	43%	84.7%	88.2%	92.0%	94.1%
Enterers with Rubella	31%	42%	81.9%	85.7%	90.5%	94.2%
Enterers with Tuberculin Tests	17%	23%	not required	not required	not required	not required

Reduced Federal funding of this program necessitated that a sliding fee schedule be adopted in order to provide these needed services. It becomes evident that this program, like many of the others, can only function properly and continue to be an asset to our community through the mutual cooperation of everyone.

Expecting couples had the privilege of attending Pre-natal Instruction Classes as a part of your health departments Pre-Natal Clinic Program. These well attended classes provided the opportunity to discuss the many aspects of pre-natal care at a time when it is most important to prospective parents.

1630 persons received nutritional supplements through the W.I.C. Program. The program conducted by your health department is federally financed.

The primary objective of the W.I.C. Program is to make nutritionally desirable foods available to pregnant or lactating women, and to infants and children who have been determined by competent professionals to be nutritional risks and meet certain other criteria. The program is designed to provide supplemental nutritious food as an adjunct to good health care during critical times of growth to prevent the occurrence of health problems.

Expansion of the Family Planning Clinic included conducting Family Planning classes under the supervision of Dr. Jose Samson. These classes, held one evening a week, are directed towards all phases of planning a family, with the ultimate goal being wanted children, well cared for - within a closer family unit.

Your health department cooperating with the Ohio Bureau of Crippled Children's Services conducted monthly Orthopedic Clinics. Operated under direct supervision of E.L. Mollin, M.D., and with followup supervision by your Public Health Nurses, the clinic provides services for those referred by family physicians, parents, schools, and the Maternal and Child Care Clinics.

Pediatric Otological Clinic (P.O.D.) is conducted five times per year under direction of R.S. Rosdale, Jr., M.D., and your Public Health Nurses. The clinic defines hearing problems of those referred from other programs and by parents.

Your Public Health Home Nursing Service has been providing seven day a week nursing care service to those at home under physicians orders. These necessary services funded by Medicare, Medicaid, private insurance, or by the patients paying ability, are most vital to our elderly residents. Physical therapist services in rehabilitation techniques were added to the program this year.

Venereal Disease is still present in our county. Your health department continues to maintain an active Venereal Disease Program including educational programs for anyone interested.

Rheumatic fever medication is dispensed by our department under physicians orders. Successful operation of this program demands that time be spent in a followup of any person who fails to secure their medicine.

The Tuberculosis Testing Program continued on a weekly basis. This important program requires that a registry of all active T.B. cases, positive reactors, and contacts be maintained in order to control the disease. T.B. medication is also dispensed by your department.

1976 will be remembered as the year of the Swine Flu Immunization Clinics. Your Health Department Staff in cooperation with the Ohio Department of Health provided this service in every township within the county.

Scoliosis Screenings (posture, curvature of the spine, etc.) were added to the School Nursing Program this year. Health screenings within the contracting schools and home visit followups were regular procedures of the school nurses.

Cardiac Clinics are conducted bi-monthly for children and young adults 1 to 21 years of age. The clinic, under the supervision of Dr. John Kramer, M.D., has been established to diagnose specific cardiac conditions of patients referred by physicians and the Health Department Clinic.

During 1976, two Blood Pressure Screening Programs were conducted. A total of 1,213 blood pressures were taken. Sixty-three persons were found to have abnormal blood pressure and referred to their family physician.

ALCOHOL CENTER

Your Health Department Alcohol Center provides a variety of services: interviewing, screening, counseling, disulfiram (antabuse) therapy, referrals to detoxification and rehabilitation hospitals, education through presentations and in-service training sessions to community agencies, civic groups and schools in the expectation that they will also be able to effectively deal with alcohol problems in our county. Two additional services were developed during the latter portion of 1976: a DWI Counter-attack School for those people convicted of driving while intoxicated and a Problem Drinkers Clinic for the problem drinker, his or her family, and those people who desire more knowledge about alcohol use and alcoholism.

The Alcohol Center underwent a change in focus in the latter part of 1976. Since the program's inception, it has been geared principally to crisis intervention. The major emphasis is now on prevention, education, and referral services in conjunction with short term counseling and aftercare. A good working relationship has also been established with the local Alcoholics Anonymous and Al-Anon groups. Several members have become involved with the DWI Counterattack School and we are hoping to have them involved in our Problem Drinkers Clinic.

Through a Title XX contract with the Tuscarawas County Welfare Department, the Alcohol Center started billing for counseling services in September of 1976. A Title XX sub-contract was also made with Personal and Family Counseling Services in Dover, Ohio, and the Mid-Ohio Alcoholism Rehabilitation Center in Cambridge, Ohio.

A complete change in staff occurred during 1976. In addition to a new director and community educator, a counselor was hired under CETA funding.

FOOD SERVICE

Eating out? Today finds more and more persons dining at public places. In order to provide clean, pleasant surroundings and assure them of wholesome food prepared and served under sanitary conditions, we have conducted 739 Food Service Inspections this past year. These inspections are required by State Law. The Ohio Department of Health conducts an annual survey of our program to determine if Food Service Operations are in compliance with the rules and regulations, and we are proud to state that the Food Service program in Tuscarawas County was approved and rated above the Ohio average. This program also includes inspections of the many food vending machine locations and the food serving operations at various fairs, festivals, and community celebrations throughout the county. Fortunately, there were no known food borne disease outbreaks reported this past year. When you stop to consider the thousands of persons who dine at restaurants, taverns, lunch stands, etc., the value of a good Food Service program becomes very significant.

PRIVATE WATER SUPPLIES

Water means life! Without water life cannot exist, foods cannot be produced, animals cannot grow, and the water must be safe to drink. We have long been concerned with the bacteriological safety of private water supplies. This past year our records indicate a growing public concern about the chemical quality of water. Numerous persons contact us when suddenly their well water changes color, becomes oily, salty, or the flow decreases. Pinpointing the specific cause is very difficult in most cases because of many unknown factors. The depth and age of the well, geological formations of the area, condition of the casing, and various other influences such as gas well drilling, surface mining, old deep mining activities, or accidental spills may cause chemical changes in a water supply. Due to the chemical quality of ground water in certain areas, acceptable water can only be obtained by using water conditioning equipment.

Our private water supply program has been conducted according to standards provided in the Ohio Environmental Protection Agency Water Well Regulations. With proper well location, construction and development, operation and maintenance, a maximum of protection will be afforded the users of individual wells and the underground stratas from which potable water is derived. Since safe water is an absolute necessity in every community, and so many factors are involved, it becomes everyone's responsibility to assist in protecting, conserving, and developing our most precious natural resource - water.

SEWAGE DISPOSAL

The desire for growth and development of areas not served by municipal sewer and water facilities continued to increase in 1976. Unfortunately, Tuscarawas County does have certain areas where it is most difficult, if not impossible to install private sewage disposal devises. A cooperative program with other agencies has been developed whereby prospective building sites are being evaluated for sewage disposal purposes before deeds are transferred. This provides any prospective buyer information concerning the soil and site limitations before transaction is completed. The combination of soil evaluation, sewage disposal layout, and final inspection usually necessitates three or more visits to each site. Though time consuming, we feel that this approach will aid present and future property owners as well as the entire area in reducing possible health problems and nuisance conditions caused by broken down sewage systems, sewage in streams, roadside ditches and flowing onto the ground surface.

SOLID WASTE DISPOSAL

A change in the Ohio Environmental Protection Agency Solid Waste Regulation became effective in July, 1976. Items of major importance to our county include the regulation of the disposal of solid wastes at industrial sites. The only "on premise" disposal that will not be regulated is that on private individual property. The regulation will also more strictly control the method of disposal of certain semi-solids; liquids; sewage; or other hazardous wastes. It requires that new plans be submitted by landfill operators and that additional permits must be secured if they are intending to receive and dispose of this type of waste.

Roadside littering and indiscriminate dumping of refuse still present problems for municipal and township officials and this office. The cooperative efforts of those who engaged in attempts to eliminate this problem are very much appreciated. We must direct efforts in securing additional collection in our rural areas. It may be in the form of house to house collection or through a community effort of weekly collection at a central point in each area. Of course, programs of this sort cost money, and will require the cooperation of everyone. It appears that indiscriminate dumping practices may be reduced if we can make it more convenient to dispose of trash legally than illegally.

RABIES CONTROL

Rabies is a serious disease for which there is no known cure. If the disease is contracted, death always follows. Any warm blooded animal, including man, could become infected if he is bitten by a rabid animal. There were 625 animal bites reported and investigated this year. We are certain that all animal bites were not reported as required by State law. Fortunately, there were no rabies involved in the bite investigations. We submitted 6 dog, 12 cat, 132 bat and 16 wild animal heads to the Ohio Department of Health laboratory for rabies tests. A raccoon, killed in Mill Township, was the only positive rabies case identified. Rabies is present in our county wild life population! Animal bite reporting, investigation, immunization of pets, public awareness and concern are all vital tools necessary to help control this fatal disease.

MOSQUITO CONTROL PROGRAM

While we recognize the mosquito as a disease carrier, more and more people are concerned with their comfort and the enjoyment of their property. This program was expanded to include 11 townships and 11 municipalities this year. The program was effective until the latter part of the season when sporadic rainfall created mosquito breeding habitats in areas that were not accessible with our present equipment. We are continuing to explore methods of reaching these inaccessible areas to apply insecticides when necessary. The cooperation of government agencies and private individuals will be most necessary if we are to achieve a more effective program.

The Vector Born Disease Unit of the Ohio Department of Health recognized the necessity of our mosquito control program by granting us funding to purchase insecticides. Unfortunately the funds were not made available until the latter part of the mosquito season, and the subdivisions did not realize the full potential this could have had, if received earlier.

SCHOOLS

County educational facilities are inspected by environmentalists as required by the Ohio Revised Code. During the past years we are finding that many schools are being renovated in some manner or another. New windows, seating, lighting, fencing and painting are the most obvious improvements. Boards of Education have been willing to make as many corrections as they are financially able. All emergency situations have been taken care of immediately. Mutual cooperative efforts have resulted in a cleaner environment for approximately 20,000 school children in 32 buildings.

SWIMMING POOLS

A regulation governing the Operation and Maintenance of Public Swimming and Wading Pools was adopted by the Board of Health this spring. Effective May 1, the regulation establishes criteria for pool management, equipment, water quality, safety and lifeguards. General acceptances of this regulation was found to be very good. Pool management and water problems are common because of the high turn over rate of managers, varying chemical properties of water, and types of equipment. The regulation provides pool operators with specific standards and management procedures. The State of Ohio has now adopted similar regulations that will be effective in 1977. The local and state regulations are designed to provide a greater degree of protection to persons using our public swimming pools.

The following is a compilation of the efforts during 1976 to promote public health in Tuscarawas County.

1. Health Information Activities:	
Radio Programs	55
Meetings Attended	175
Newspaper Releases	121
Talks	41
2. There were 34 Inservice Training Seminars or Shortcourses attended by the Sanitarians, Nurses, Social Worker, Dietician, Health Educator, Speech Therapist, and Alcohol Educational Consultant.
