Tuscarawas County:

"THE SECRET OF CHANGE IS TO FOCUS ALL OF YOUR ENERGY NOT ON FIGHTING THE OLD, BUT ON BUILDING THE NEW." -Socrates

The Tuscarawas County Health Department continues to conduct contact tracing of individuals who have had contact with someone who has been infected with the COVID-19 virus. Contact tracing is an important part of decreasing the spread of infection. The image below explains the process of contact tracing.

Contact Tracing – Ohio's Path Forward

OUR COMMITMENT TO YOU!

We understand that things are stressful for many people right now. We are doing everything we can to uphold the State's orders and recommendations to keep the community as safe as possible. As the Tuscarawas County Health Department (TCHD), our commitment to you is to prevent disease, promote health, and protect the environment, as well as to share the information provided to us by the Ohio Department of Health and the Governor in a timely fashion. We will share information with you as it is received. We will not withhold shareable information.

Also, if you have visited us recently, you may have noticed that there are extra precautions in place to fulfill our commitment to ensure that TCHD visitors and staff remain as safe and healthy as possible. Due to the nature of COVID-19 and the process of contact tracing explained above, if one TCHD staff member becomes infected, all other staff members that had close contact with that person would be quarantined for 14 days. While it may appear that our precautions are extreme, please know that they are being taken in order for us to keep our commitment of sharing information, preventing disease, promoting health, and protecting the environment for all who live and work in Tuscarawas County.

We are available to answer your questions! You can also find more information at Facebook.com/tchdnow or on our website at tchdnow.org, including a listing of guidance by sector for reopening responsibly.

We thank you for your continued support!

Tuscarawas County Health Department's Current Situational Goal:

Continue to provide timely and accurate information to the public and stakeholders while protecting patient confidentiality, and minimizing the spread of the virus through contact tracing, notification, and tracking.
